## EDUCATION

### •Bachelor of Technology in Computer Science and Engineering(AI/ML)

2023-27

SRM Institute of Science And Technology, Ramapuram, Chennai

CGPA: 9.812

## PERSONAL PROJECTS

### •MRI Brain Tumor Classification System

A production-grade deep learning system to classify brain tumors from MRI scans across 4 classes

- Engineered ResNet50-based transfer learning pipeline for accurate medical image classification
- Built interactive Gradio interface with real-time predictions and confidence scoring
- Implemented model validation, bias detection, and fallback mechanisms for reliability
- Technology Used : PyTorch, ResNet50, Gradio, Torchvision, PIL, NumPy

### •Foreman: Autonomous Software Development Engine

Full-stack task orchestration platform for real-time agent workflows and code generation

- Designed a DAG-based orchestration engine that manages task dependencies and states (PENDING, RUNNING, PASSED)
- Built an asynchronous backend with FastAPI and AsyncIO, streaming live task status, logs and generated files over WebSockets
- Developed a React dashboard with a task graph view, live log stream and a tabbed code viewer with .zip export
- Technology Used: Python, FastAPI, WebSockets, React, TypeScript

### •AI Document Intelligence Platform (Retrieval Intelligence Engine)

AI-powered Retrieval-Augmented Generation (RAG) system for intelligent document search and question answering

- Built a document intelligence platform enabling users to upload PDFs and query them using natural language
- Implemented document chunking, embedding generation, vector search, and semantic retrieval pipelines
- Integrated Large Language Models to generate context-aware responses grounded in retrieved documents
- Technology Used: Python, LangChain, ChromaDB, Hugging Face Embeddings, Streamlit, Groq LLM

## EXPERIENCE

### •Opportive Web Development Internship

July - August 2025

Full Stack Developer Intern

Online

- Built and optimised responsive UI components in React and TypeScript, integrating RESTful APIs to enable real-time data handling across the platform
- Implemented Git/GitHub workflows and CI/CD pipelines that streamlined development and deployment, cutting manual release steps
- Applied software development life-cycle (SDLC) best practices to automate deployment workflows, driving process-improvement and efficient Git version control management.

### •ShadowFox UI/UX Internship

June - July 2025

UI/UX Intern

Online

- Designed wireframes and interactive prototypes using Figma
- Translated designs into responsive web pages using HTML, CSS, and JavaScript
- Improved user experience through optimized layouts, navigation flow, and usability

## TECHNICAL SKILLS AND INTERESTS

**Languages:** Python, HTML5, CSS3, TypeScript, JavaScript, SQL, C/C++, Java

**Frameworks & Libraries :** React.js, Node.js, Express.js, FastAPI, PyTorch, Scikit-learn, Pandas, NumPy, LangChain, Hugging Face Transformers

**Tools and Platforms:** Git, GitHub, ChromaDB, Gradio, Streamlit, Figma, Uvicorn

**Databases:** MongoDB, MySQL

**Concepts & Domains:** Machine Learning, Deep Learning, Generative AI, Retrieval-Augmented Generation, Natural Language Processing, REST API Development, Asynchronous Programming, Real-time Systems, UI/UX Design

## CERTIFICATIONS

- Artificial Intelligence Specialization – IBM
- Generative AI and Prompt Engineering – IBM
- Microsoft 365 Copilot and Agentic AI – Udemy
- MongoDB for Students – MongoDB
- Software Engineering Job Simulation – JPMorgan Chase
- Python for Data Science – NPTEL
- McKinsey Accelerate (Forward Program) – McKinsey
